

## **Finance Update September-November 2026**

Since September, our department has secured an additional \$538,751 in grant funding, further strengthening our ability to support essential public health programs. These funds supplement the grants previously awarded earlier in the year and continue to reinforce our department's financial stability.

We continue to navigate ongoing funding adjustments, particularly within federal programs, but our strategic approach to resource management has allowed us to remain flexible. Even with fluctuations in certain grants, we have been able to sustain and fund critical areas of need through targeted use of available grant dollars. Our commitment to maintaining a lean, efficient, and sustainable financial structure remains unchanged. Through careful monitoring of expenditures and proactive planning, we ensure that essential services continue uninterrupted and that resources are directed where they are most needed.

Looking ahead, we will continue to adapt to funding changes while maximizing every opportunity to support our staff, programs, and community. The department remains focused on stewardship, efficiency, and making the greatest possible impact with the resources entrusted to us.
